Large Print Sudoku

8 PUZZLES · WARM-UP AND EASY · SOLUTIONS INCLUDED

How to play

The grid has nine rows, nine columns and nine 3×3 boxes separated by heavier lines. Fill in the empty cells with the digits 1 to 9 so that **every row, every column and every 3×3 box contains each digit exactly once**.

Every puzzle has exactly one solution and can be solved by logic alone — no guessing. Use a pencil. The two simple methods on the next page are all you need.

Two simple methods

1. The only option in a cell

Look at one empty cell. Check which digits already stand in its row, its column and its 3×3 box — those digits cannot go in this cell. If **only one** digit can go there, that is the one to write in. The four **warm-up** puzzles can be solved to the end with this method alone.

2. The only place for a digit

Now turn the question around: take a digit and ask where it can go. Pick one 3×3 box and one digit, say 7. Check which empty cells of that box the seven can go in at all — which ones are not blocked by a seven in the same row or column. If **only one such cell** is left, the seven must go there. You will need this method in the four **easy** puzzles.

Where to start

With the rows, columns and boxes that already hold the most digits. After every digit you write in, look around it — one new digit changes a whole row, column and box at once, and very often reveals the next cell.
